«Smart City»

Definition

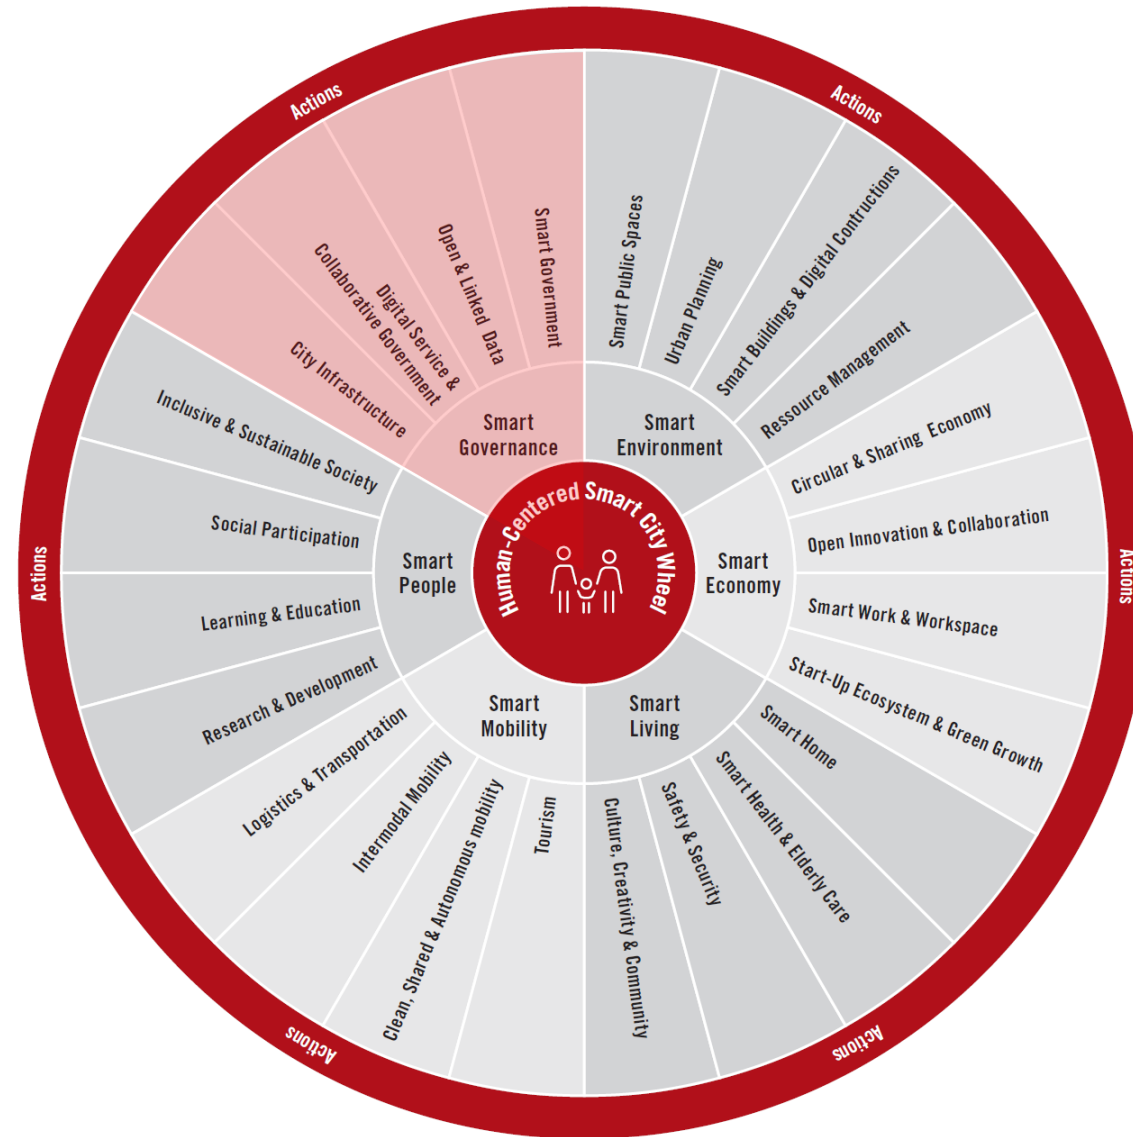

"In a smart city, technologies and data are linked to increase the quality of life for residents and the quality of location for businesses, while using less resources. Residents are an essential part of the developments and can develop, test and co-determine solutions for everyday life. “

St.Gallen, September 2018

Activities

Smart City Wheel

Smart Governance

- **Smart Governance:** Using the resources in a smart and efficient way, using technology to improve the existing services
- **Open & Linked Data:** Making data open and using it itself in order to create a data-driven government (Open Data Portal Canton & City of St.Gallen: daten.sg.ch)
- **Digital Service & Collaborative Government:** Using participative methods, external knowledge in order to improve services and get insights from different perspectives.
- **(City Infrastructure):** Providing an infrastructure that allows us to create smart projects in all other areas.

YOUR CHALLENGE

Challenge | Social assistance | Social aim

- Social assistance is a very important but costly service in the public sector.
- The goal of our social aid system is to support the recipients as a last “**safety net**” and supporting them to overcome **difficult circumstances in life**.
- The **ultimate aim** is to get out of the system and remain **economically independent** in the future.

Challenge | Social assistance | Expenditure

Net expenditure on social assistance in the broader sense, 2019

Share of benefits

Database on: 22.06.2021

Recipients of social assistance in the broader sense, 2019

Share per benefit (excluding double counting)

Source: FSO – Statistics on social assistance recipients

© FSO 2021

Challenge | Social assistance | Expenditure

- Also in the City of St.Gallen with roughly 90 Mio., Social Services is the department with the second highest expenses. Roughly 60 Mio. fall on Social assistance.

Challenge | Social assistance | Paybacks

- In contrast to the social and political goal of social welfare stays the financial technicality that welfare recipients are accumulating financial liabilities towards the state and technically have to **pay back their** debt when they are **financially independent again**.
- Because of **scarce personal and financial resources** of the city administration, the social services have set the a goal for this year to conceptualize and test the possibilities to increase these paybacks.
- The goal is to **smartly** invest personal resources in order **to increase the amount of paybacks** from former recipients.

... WITHOUT JEOPARDIZING THE SOCIAL GOAL OF KEEPING PEOPLE OUT OF THE SOCIAL AID SYSTEM

Challenge | Your Mission

The goal is to

- increase the overall paybacks and therefore reduce overall costs
- without increasing individual fallbacks into the social aid system.

Challenge | Specific Questions

- The Social Service department has a specific need and will try to evaluate, test and implement your solutions afterwards.
- They act as a client of yours and therefore asks you the following specific questions:
 - Which groups of recipients do they need to motivate in order to increase overall paybacks without jeopardizing their financial well-being and optimize the department's scarce personal resources?
 - What motivational options exist to support recipients?
 - How can these measures be communicated / transported to the recipients?

→ *Please ask, if you don't understand our need*

Resources | What are you working with?

- Dummy dataset of welfare recipients and their characteristics
- Dummy dataset of former welfare recipients who are paying back
- Statistical population data in machine readable format
- Social aid statistics on a national level.
- Your Skills and Creativity!

Results | What are we expecting from you?

1. **Analysis of the willingness and ability of paybacks** from different recipients' profiles:
Who is likely to payback based on the data provided?
 2. **Visualization or application** that displays the critical factors of paybacks in an understandable manner and that **enables social workers** to optimize their own resources
 3. **Measures / motivational scheme** that makes use of these insights and practically leads the former recipients to pay back a realistic amount:
How would you interact and communicate with recipients in order to implement these measures and practically increase paybacks?
- **These aspects may be combined in a digital application or be worked out separately**

Judging Criteria

START Hack Criteria

Complexity & Technical Sophistication

Usage of appropriate services and technologies

Design

Usability of the solution

Viability

Possibility of realizing the solution

Feasibility

Maturity Level of the developed solution

Creativity & Innovation

surprise effect to the jury

Presentation

Communication of the developed solution

St.Gallen Criteria

▪ **Usefulness of your solution:**

- The case is a real world challenge, that we start tackling in this year.

The more useful it is for us, the better!

- Because of the scarce resources the most important part is the analysis and identification of the profiles.

Your solution should therefore definitely contain this part or show what you have tried in the analysis.
